

How to Install & Configure a Zero Trust Gateway in Less Than 4-hours

With the new adoption of “Work-From-Home” business platforms, a higher demand has been placed on companies to provide their remote users with a solution to emulate their traditional on-premise work experience. During the early months of this transitive period, many companies, whom did not already have a standing infrastructure to support this form of business, found themselves hurrying to the simplest solution for providing their employees with remote access, a VPN solution. Although implementation of a VPN in their network does meet the requirement for providing their users access to the corporate network, it does come with a few apparent weaknesses, namely security and manageability. However, there is another solution to meet all these needs quickly and easily to overcome common complacency among companies to busy with other business cycles to make the leap into a solution for the long term, the AmZetta Digital Workspace Solution!

The AmZetta Digital Workspace Solution offers customers the opportunity to try a no obligation Proof-of-Concept demo in their own corporate network. Run your own applications and desktops to see the improved user experience, performance and added security offered within your own environment workloads. In under 4 hours, the AmZetta Digital Workspace Solution can be fully installed, configured, and deployed to your end uses, complete with comprehensive professional training by an AmZetta solutions engineer to understand and manage the full breadth of features used functionalities offered.

The itinerary for a standard Digital Workspace Proof-of-Concept can be broken down into three parts:

Time Req.

PART 1

1 hr

A remote session is hosted by a solutions engineer who will coordinate directly with your technical administrator to install and integrate the Digital Workspace into your existing network. The time needed to complete this process is 1 hour.

Time Req.

PART 2

1 hr

Once the installation is complete, custom configurations and deployments will be put in place, allowing the Digital Workspace solution to leverage an existing user base, applications, or desktops to be used during the “Proof-of-Concept”, alternatively local users and basic apps and desktops will be configured and provided for use. Access controls and user assignments will also be configured, ensuring the end-users only have access to their containerized instances. The time needed to complete this process is 1 hour.

Time Req.

PART 3

2 hrs

Complete professional level training will be provided to your team of administrators to ensure full comprehension of the mechanisms and management of the whole solution. During this training, demonstrations will be done to walk administrators through the lifecycle of deployment including how to add, edit, and remove virtual desktops and virtual applications from assigned users and how to configure various tools and features for remote access, such as multi-factor authentication. The time needed to complete this process is 2 hours.

Once complete, a quick introduction will be made with the support team while you enjoy your 30-day trial. Our support team will provide you with the same level of support offered to our customers to ensure your experience goes without impediment.
