

PRODUCT OVERVIEW

Secure Client Manager (SCM), by AmZetta, is the management software that provides web-based management of client devices from a single pane of glass. SCM helps to reduce PC infrastructure management costs, enhance data security and cut down IT management overhead. Finally, a complete client management solution you can afford!

Secure Client Manager is a management software that provides remote management of client devices. Through SCM administrators can remotely monitor, manage, and provision end point devices easily. It provides access to client devices and it supports like device inventory and status, Power Management, Provisioning Management and Access control, etc. Administrator creates the device and user policies and apply to devices.

Secure Client Management allows client devices to be configured & managed over the network.

SCM Highlights

- Centralized, Simplified and unified management of client devices
