

Modern Endpoints, Longer Life, Extend Hardware Lifecycle with SnapOS

Windows 10 end of support doesn't have to mean a fleet-wide replacement. SnapOS turns the PCs you already own into secure, centrally managed enterprise endpoints.

THE SNAPOS ADVANTAGE

- ✓ Repurpose existing Windows 10 hardware
- ✓ No Windows licensing required
- ✓ Immutable, secure operating system
- ✓ Centralized management with zMAN Director
- ✓ Automated deployment, fleet-wide
- ✓ Browser, SaaS, VDI & RDS ready
- ✓ Hardware independent, enterprise scalable
- ✓ Lower total cost of ownership

Every Industry Has the Same Endpoint Problem. SnapOS Is the Fix

Across education, healthcare, government, financial services, manufacturing, retail, logistics, and business services, IT teams face many of the same challenges: aging hardware, rising support costs, inconsistent security, and complex endpoint management.

SnapOS provides a common solution. It replaces Windows with a lightweight, immutable operating system that can run on existing hardware, while zMAN Director gives IT teams one centralized console to deploy, configure, monitor, update, and support the entire endpoint fleet.

The result is a secure, scalable endpoint platform that adapts to different industries, users, applications, and deployment models without requiring every organization to rebuild its infrastructure from scratch.

One Platform. Every Industry.

 Education Labs, faculty devices, libraries, testing centers	 Healthcare Nursing stations, clinical & telehealth workstations	 Government Public offices, branch locations, service kiosks	 Financial Services Branches, teller stations, call centers
 Manufacturing Production floor, warehouse & QA terminals	 Retail & Hospitality POS, front desk, self-service kiosks	 Logistics Shipping, dispatch, warehouse operations	 Business Services Call centers, legal, accounting, MSPs

Centralized Management Built into the SnapOS Platform

SnapOS works together with zMAN Director, its centralized endpoint management platform, to give IT teams complete visibility and control from a single console. Administrators can deploy, configure, monitor, update, and support thousands of endpoints without managing each device individually. This unified approach reduces routine maintenance, simplifies large-scale endpoint operations, and helps organizations lower support costs while maintaining a consistent security posture across the entire fleet.

Modernize your endpoints. Keep your hardware.
